

“UNBELIEVABLE! My boat now goes faster at lower RPMs.”

Comments made during Bob Stoddart's interview with Freshwater News. Statement not provided by The Propeller Works.

“After having Propeller Works tune my props, I had the following improvement.

Beforehand, I cruised my 33' Searay at 28.5 mph at 3400-3500 RPM. After having my props tuned by Propeller Works, I cruise at 31.5 mph at 3300-3400 RPM's full of fuel!

Unbelievable! I couldn't be happier and I recommend it to everyone I know. In addition, I have experienced a 50% reduction in vibration in the rear of my boat over the engine compartment.

Thanks again for the great work. I will recommend you to all my fellow boaters.

Bob Stoddart
